

BMIT's International Service is the latest addition to our portfolio of data centre services.

We have created a strategic alliance with leading data centre operators in Guernsey, Isle of Man, Gibraltar and in at least 25 other cities all over Europe. Such relationship has allowed us to extend our portfolio of data centre services to new territories and jurisdictions. Furthermore, through our collaboration with Interoute, a sister company of GO, BMIT has direct access to Europe's largest and most advanced Next-Generation Network (NGN) offering the full complement of network and value added services.

BMIT have invested in an extensive virtual hosting platform with complete redundancy and we can offer failover within each data centre. Over and above, we can even transfer virtual machines between data centres to offer a geographic failover service if required.

With existing and new service levels BMIT is offering, we can create just the right virtual data centre environment your business requires, wherever it may be around the globe. But it's not just about data centres. BMIT forms part of the most advanced pan-European next generation network. We can therefore ensure control over the flow of data between your business and your customers. Our data centres allow you to manage and grow your business and operations in a more efficient, effective and secure environment.

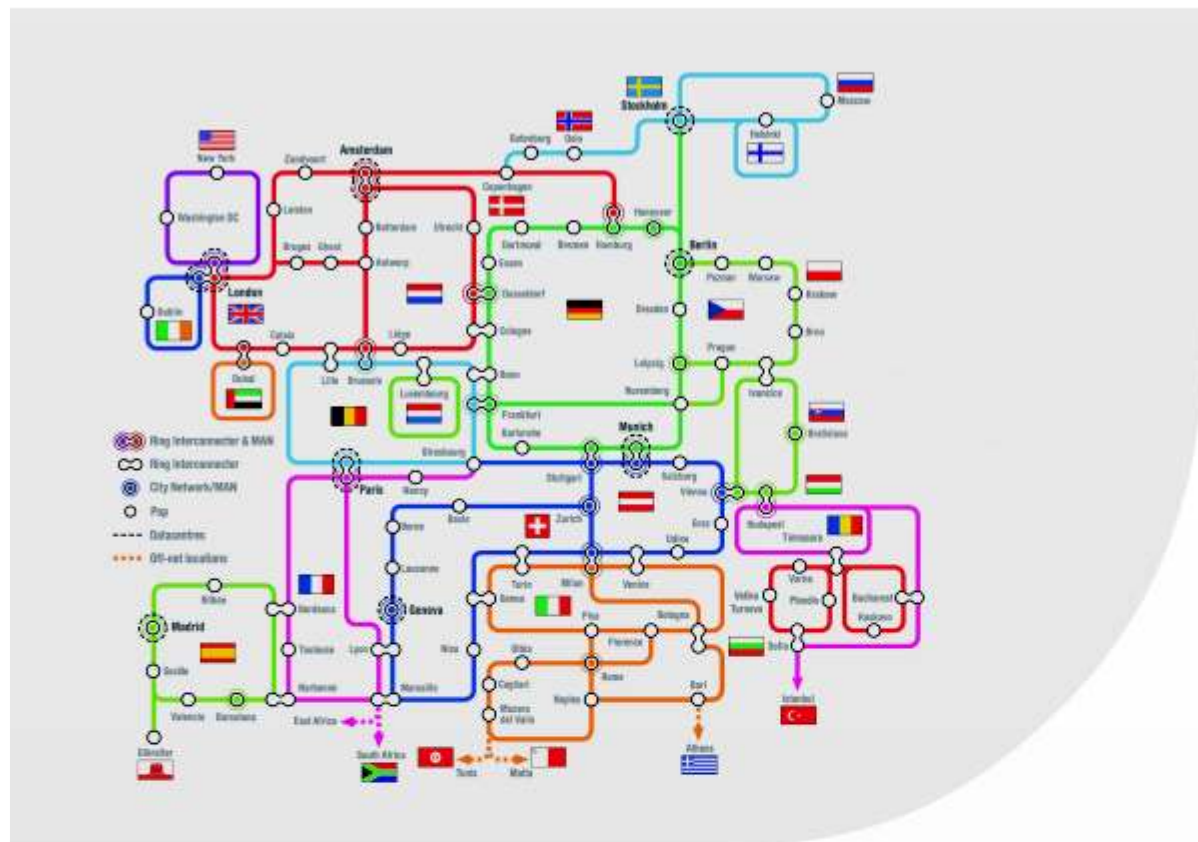

From London to Paris, from Moscow to Rome, or from Malta to the Isle of Man, we can provide you with a service wherever you may need. We will provide you with a single point of contact for all your data centre and network requirements and guarantee a seamless service across our network of data centres.
