

# It's your data. So have it your way.

**At BMIT we understand just how important it is to keep your online presence safe and secure. After all, how could you manage without it?**

## **What sets BMIT apart?**

With us the sky is the limit. Through our flexible and affordable suite of solutions, we can craft an IT infrastructure that is as unique as you, so you'll be able to achieve your goals today while still planning effectively for tomorrow.

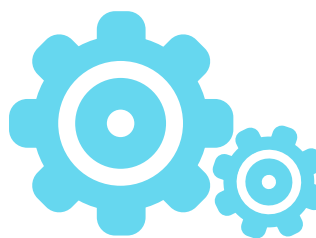

Our data centres are **ISO 27001** and **PCI DSS** certified, giving you complete peace of mind as to what you can expect from us. BMIT's services put your business right at the core of every solution that we have to offer. We have been in the business for over 10 years and have a portfolio of valued clients ranging from small local businesses to huge multi-nationals. As a result, we have built a comprehensive collection of services to perfectly suit the individual requirements of your company.

Our network-independent data centres are connected to numerous carriers to provide you with multiple bandwidth connectivity options, as well as 24x7 system, network and infrastructure monitoring and support.

## How could BMIT be of service to you?

Our suite of flexible services can be tailored and scaled to meet your needs and budget, freeing up your time and energy to focus on your core business. These solutions include:

- Colocation
- Managed Private Cloud
- Managed Data Centre Services
- Managed Hybrid Cloud

Added value is provided in the form of our expert team of our Data Centre and Managed Services specialists, who will guarantee that any requirements are addressed and managed for your complete satisfaction. They will also offer you on-site technical and logistical support every step of the way.

## BMIT Data Centre Features & Environment

### 1 Power

A multi-tiered system is in place to maximise uptime availability at BMIT, and our redundant rack power is delivered via two distinct feeds. Each is further secured by an N+1 Uninterruptible Power Supply (UPS) system, which prevents against brownouts, surges and power spikes, as well as an N+1 generator setup to protect against utility failure.

### 2 Cooling

A strong HVAC system which safeguards:

- Stable airflow
- Temperature and humidity control
- Minimum N+2 redundancies for all major equipment.

### 3 Fire Detection and Suppression

Each data centre area has a multi-zoned FM-200 fire suppression system that kicks into action the second smoke or fire is detected. Fire detection is carried out through multi-zoned smoke detectors coupled with Very Early Smoke Detection and Alarm (VESDA) systems.

### 4 Physical Security

Security is one of our foremost concerns, and high-level security equipment and procedures are in place at all times and across all our data centres.

Measures include:

- Monitoring and CCTV recording throughout the buildings, including in customer care areas, with all access points constantly controlled
- Visitor screening, with identities verified and individuals escorted to the appropriate locations
- Access history recordings, which are kept for customer audits when requested or required.

So why not contact BMIT today, to discover how our Data Centre Services could transform your business' online efficiency and security? We're here to help on [www.bmit.com.mt](http://www.bmit.com.mt). Alternatively, contact our sales team directly on [sales@bmit.com.mt](mailto:sales@bmit.com.mt).
